

## On the synonymy of *Stenus* (s.str.) *kamtschaticus* Motschulsky, 1845 (Coleoptera: Staphylinidae: Steninae)

Alexandr B. Ryvkin

Ryvkin A.V. 2013. On the synonymy of *Stenus* (s.str.) *kamtschaticus* Motschulsky, 1845 (Coleoptera: Staphylinidae: Steninae). *Baltic J. Coleopterol.*, 13(2): 141 – 151.

The lectotype of *Stenus* (s.str.) *kamtschaticus* Motschulsky, 1845 is designated; the name is put in the synonymy of *S. (s.str.) clavicornis* (Scopoli, 1763). *Stenus* (s.str.) *aquilonius* L.Benick, 1921 is revalidated as a species propria; new data on its distribution are provided and discussed. Both *S. (s.str.) affinisecretus* Zhao & Zhou, 2007 and *S. (s.str.) guandiensis* Zhao & Zhou, 2007 are the synonyms of *Stenus* (s.str.) *aquilonius* L.Benick, 1921, not of *S. (s.str.) kamtschaticus* Motschulsky, 1845.

### INTRODUCTION

*Stenus kamtschaticus* Motschulsky, 1845 was originally described based on unspecified number of specimens from the Kamchatka Peninsula. Though the original description was detailed enough including coloration of the legs (“Les pattes sont jaunes avec les genoux, la pointe des jambes et les tarses d'un noir brunâtre.”), J.Sahlberg (1880) deemed it necessary to redescribe the species from a series collected in “territorio arctico et silvoso” of the middle and lower reaches of the Yenisey. Since some differences between both descriptions were quite evident (e.g. in body length, coloration of the femora, etc), Sahlberg supplied the species name with the question mark in his monograph. All the subsequent authors ignored this important marking and followed Sahlberg’s concept, although L.Benick (1921) noted the discrepancy in certain

characters; but that did not prevent the latter from redescribing the same (listed by Sahlberg) species as new under the name *aquilonius* in the same article. Puthz (1965) provided a sketchy but recognisable figure of the aedeagus for the species he regarded as *S. kamtschaticus*, and later (Puthz 1967b) established the synonymy of *S. aquilonius* L.Benick, 1921 with this species. The two species names, *S. (s.str.) affinisecretus* Zhao & Zhou, 2007 and *S. (s.str.) guandiensis* Zhao & Zhou, 2007, established on the Chinese material, were synonymized by Puthz (2008) with *S. kamtschaticus*.

Some years ago, I have found a male specimen labelled as *S. kamtschaticus* in the Motschulsky collection of the Zoological Museum of Moscow State University. The specimen has been in fairly good condition and corresponded well to the original description. Alexey Gusakov, cura-

tor of Coleoptera in the named Museum, has recently found one more specimen (partly damaged female) with the similar hand-written original label in so called “Historical collection”. Both specimens, which must be regarded as members of the type series, have proved to belong to *Stenus clavicornis* (Scopoli, 1763). Thus we have an opportunity to designate a lectotype and to resolve the taxonomic and faunistic problems concerning *S. kamtschaticus* and related names.

The Systematic results given below contain the lectotype designation as well as new and emended synonymy, additional faunistic data, and analysis of the previous records.

## SYSTEMATIC RESULTS

### *Stenus (s.str.) clavicornis* (Scopoli, 1763)

*clavicornis* Scopoli, 1763: 100 (as *Staphylinus*)

*clavicornis*; Ryvkin, 1990: 154

*clavicornis*; Veselova & Ryvkin, 1991: 187

*clavicornis*; Lobkova & Semenov, 2012: 95

*clavicornis*; Puthz, 2013: 856

*kamtschaticus* Motschulsky, 1845: 355 **syn. n.**

*kamtschaticus*; Gemminger & Harold, 1868: 637

(For other important catalogue references on *S. clavicornis* see Herman, 2001: 2126)

#### Material (Kamchatka only). Type specimens.

(For labels see Figs. 1-2). 1 male-LT (ZMMU, designated here): [without segments 3-11 of the left antenna, 2 apical segments of the left maxillary palpus, and the left metatarsus; with a pin hole in the abdominal segment 4 (2<sup>nd</sup> open); transferred by me from the original mica plate onto the new cardboard rectangle, the original plate has been pinned under the new rectangle] 1: ‘*Stenus | kamtschati-cus m.| Kamtsch.*’ [black, rusty indian ink on white, yellowed rectangle]; 2: ‘LECTOTYPUS’ [my standard printed red label]; 3: ‘*Stenus LT | kamtschaticus* Mots.| A.B.Ryvkin

**Fig. 1–2.** — The type labels of *Stenus kamtschaticus* Motschulsky, 1845. 1: LT-male; 2: PLT-female.

des. 2011.' [my standard determinative label]; 4: '*Stenus | clavicornis* (Scop.)| A.B.Ryvkin det. 2011.' [my standard determinative label]. — 1 female-PLT (ZMMU): [without head and prothorax, left hind leg, and the tarsi of extant legs excluding the segments 1-4 of the right metatarsus; with a pin hole in the abdominal segment 4 (2<sup>nd</sup> open); transferred by me from the original small pin onto the new cardboard rectangle, the original pin has been attached under the new rectangle] 1: '*Stenus | kamtschaticus* | Kamtsch. m.' [black, rusty indian ink on white, yellowed rectangle]; 2: 'Paralectotypus' [my standard printed red label]; 3: '*Stenus PLT | kamtschaticus* | Motsch.| A.B.Ryvkin des. 2011' [my standard determinative label]; 4: '*Stenus | clavicornis* (Scop.)| A.B.Ryvkin det. 2011' [my standard determinative label]. **Additional material.** 2 females (AR): Kozyrevsk. 20.06.1975. B.A.Korotayev leg. — 1 female (AR): 11 km W of Petropavlovsk. 16.06.1975. B.A.Korotayev leg. — 1 male, 1 female (AR): near Paratunka, birch forest with Poaceae gen. spp., leaf litter. 12.08.1987. A.V.Tanasevitch leg. — 1 female (AR): near Mil'kovo, Kamchatka River valley, birch forest with ferns and motley grass, leaf litter. 24.08.1987. A.V.Tanasevitch leg. — 1 male, 2 females (AR): Geyser Valley, open slope, grass and leaf litter. 30.08.1987. A.V.Tanasevitch leg. — 1 female (AR): same locality, in moss on warm slope. 30.08-05.09.1987. A.V.Tanasevitch leg. — 1 female (AR): same locality, birch forest with motley grass on slope, leaf litter. 01.09.1987. A.V.Tanasevitch leg.

**Remarks.** One of the most widely distributed species in the temperate Palaearctic, found principally in litter and moss of mesic communities (middle to late stages of plant successions and climax) (Veselova & Ryvkin, 1991). It is also collected in several points of the Nearctic; contrary to the widespread opinion (e.g. Puthz 2013), the Nearctic distribution is not restricted to eastern territories of North America: I have on hand a male specimen of the species from British Columbia (EMEC).

I have mentioned *S. clavicornis* for Kamchatka formerly (Ryvkin 1990), it has also been recorded from there recently by Lobkova & Semenov (2012)

based in part on my old identifications. The specimens from Kamchatka, as well as many other Far-Eastern specimens, frequently have the body more convex with the abdominal segments subcylindrical, resembling those of *S. (s.str.) distans* Sharp, 1889 and other similar species of the *clavicornis* group; but at the same time the shape of aedeagus is extremely conservative and demonstrates no variability throughout the whole wide range of *S. clavicornis*.

A.B.Ryvkin leg. — 3 females (AR): Selemdzhinskiy District, Selemdzha River, 4 km up-stream of Ekimchan, up-stream of Unerikan River mouth, 495 m a.s.l., mosses and leaf litter under *Populus* sp., *Picea ajanensis*, *Abies nephrolepis*, with Poaceae gen. sp., *Equisetum* spp., *Pyrola* sp., *Ribes* sp., *Rosa* sp., *Vaccinium vitis-idaea*, etc. in riverside forest. 27.08.2006. A.B.Ryvkin leg. — 1 female (AR): Selemdzhinskiy District, near Selemdzhinsk, 270-280 m a.s.l., under bark of rotten twig in village. 11.08.1976. E.M.Veselova & A.B.Ryvkin leg. — 1 female (AR): Selemdzhinskiy District, Norskiy Nature Reserve, right side of Meun River near mouth, mosses and litter in spruce forest with *Maianthemum bifolium*, *Trientalis europaea*, *Equisetum pratense*, *Hylocomium splendens*, *Pleurozium schreberi*, etc. 18.08.2004. A.B.Ryvkin leg. — 1 female (AR): Selemdzhinskiy District, Norskiy Nature Reserve, Nora River, 0.5 km up-stream of Gryashchinskaya Mt., mosses and leaf litter under *Betula platyphylla* and *Larix gmelinii* with *Calamagrostis* sp., *Equisetum sylvaticum*, *E. pratense*, *Maianthemum bifolium*, *Smilacina davurica*, etc. in burnt forest along river bank. 27.08.2004. A.B.Ryvkin leg. — 2 females (AR): Selemdzhinskiy District, Norskiy Nature Reserve (buffer zone), Burunda River basin, 4 km NW of Burunda cordon, mosses and leaf litter on very gentle slope with *Larix gmelinii*, *Alnus* sp., *Ledum palustre*, undergrowth of *Betula platyphylla*, *Hylocomium splendens*, *Dicranum* sp., etc. 08.10.2004. A.B.Ryvkin leg. — 2 males (AR): Mazanovskiy District, right side of Nora River, S slope of Zmeinaya Mt. (from foot to rill) among *Alnus* sp., *Larix gmelinii*, *Picea ajanensis*, *Populus* spp., *Padus* sp. with Poaceae gen. spp., *Carex* spp., *Marchantia* sp., etc. 17.07.2005. A.B.Ryvkin leg. — Khabarovsk TERRITORY: 1 male (AR): Okhotskiy District, Amka River mouth (Ulya River basin). 13.08.1987. I.D.Sukacheva leg. — 1 male (ShIN): Verkhnebureinskiy District, Bureinskiy Nature Reserve, Pravaya Bureya River up-stream of Medvezhye winter hut, 870 m a.s.l., mosses and litter among *Larix gmelinii* and *Duschekia* sp. with *Vaccinium vitis-idaea*, sparse Poaceae gen. spp., *Carex* spp., *Ledum palustre*, *Hylocomium splendens*, *Pleurozium schreberi*, *Dicranum* sp., *Sphagnum* spp. etc. in flood-plain forest at riverside. 18.07.2007. A.B.Ryvkin leg. — 1 male (AR): Verkhnebureinskiy District, island on Niman River 700 m up-stream of Niman cordon of Bureinskiy Nature Reserve, 1040 m a.s.l., mosses and leaf litter in flood-plain forest with *Populus* sp., *Salix* sp., *Spiraea* spp., *Sorbaria sorbifolia*, Poaceae gen. spp., *Carex* spp., *Sphagnum* sp., *Polytrichum* sp., *Hylocomium splendens*, etc. 11.08.2008. A.B.Ryvkin leg. — 1 male (lost at sending): Khabarovsk Territory, Verkhnebureinskiy District, left side of Olga River valley 3 km up-stream of Sofiysk, 880 m a.s.l., mosses, leaf litter & plant debris on gentle slope near rill amid mari with hummocks of *Sphagnum* spp., *Carex* ? *globularis*, *C. spp.*, Poaceae gen. spp., *Ledum* sp., *Vaccinium uliginosum*, *V. vitis-idaea*, *Polytrichum* sp., *Hypnum* sp., *Hylocomium splendens*, *Pleurozium schreberi*, *Ptilium cristacastrensis*, *Betula* spp., etc. 19.08.2008. A.B.Ryvkin leg. — 2 females (DUBC): Verkhnebureinskiy District, Bureinskiy Nature

Reserve, "Strelka" cordon, soil in forest with *Abies nephrolepis*. 27.07.2006. A. Barševskis & U. Valainis leg. — 1 male, 1 female (DUBC): same locality and collectors, 26-27.07.2006. — 1 female (OB): Verkhnebureinskij District, Bureinskij Nature Reserve, Levaya Bureya River up-stream of Imganakh River mouth, 650 m a.s.l., loamy bank of the river with *Carex* sp. and Poaceae gen. sp. 05.07.2011. A.B.Ryvkin leg. — 1 female (OB): Verkhnebureinskij District, Bureinskij Nature Reserve, Levaya Bureya River up-stream of Imganakh River mouth, 660-670 m a.s.l., moss and litter on mari with *Ledum* sp., *Sphagnum* spp. *Pleurozium schreberi*, *Vaccinium vitis-idaea*, *Larix gmelinii*, *Cladonia* spp., etc. 05.07.2011. A.B.Ryvkin leg. — 1 female (AR): Verkhnebureinskij District, left side of Bureya River opposite Shakhtinskiy, 370 m a.s.l., UV light. 16.06.2013. A.B.Ryvkin leg. — **MARITIME PROVINCE:** 1 female (AR): Kavalerovskiy District, Uglovoy Rill. 29.06.1972. A.P.Rasnitsyn leg. — 1 female (AR): Kavalerovskiy District, Priiskovaya Pad', pine-deciduous forest, in litter, sample #1. 28.07.1977. L.D.Filatova leg. — 1 female (AR): same locality and collector, burnt forest. 29.07.1977. — **KAMCHATKA AREA:** 2 ex (IBPM): Esso, flood-plain of Bystraya River. 27.06.1975. B.A.Korotyayev leg. — 1 female (KBR): Kamchatka, Lazo, Barber trap near cow-house. 20.06.1986. L.E.Lobkova leg.

**Remarks.** Since all the authors who mentioned *S. kamtchaticus* after Sahlberg S-(‘S-s) redescription followed his concept of the species, all their records are to be related to *S. aquilonius* L.Benick, 1921, sp. propria, which the concept conforms to in fact, excluding evident misidentifications. Therefore I cite the records of *S. kamtchaticus* from the catalogues (Fauvel 1875, Heyden 1881, 1898, Jakobson 1908, etc) in this section only, though each of them certainly contains reference to Motschulsky's original description and should be formally provided under both *aquilonius* and *clavicornis* as well. Both *S. affinisecretus* Zhao & Zhou, 2007 and *S. guandiensis* Zhao & Zhou, 2007 have to be transferred to the synonymy of *S. aquilonius* L.Benick, 1921. I have seen no material from China; the figures of aedeagi for *S. affinisecretus* and *S.*

*guandiensis* obviously differ in the original description one from another and from that of real *S. aquilonius*; so the synonymy is given here according to Puthz (2008) who has on hand a male-paratype of the first-named species.

This species extremely variable in its external characters has supposedly been confused by some authors with other representatives of the subgenus *Stenus* s.str. The record of the Tobolsk Government in Jakobson (1909) is likely based on misinterpretation as none of the sources cited by him contains a mention of similar locality. Puthz (1967b) has noted a misidentification in Poppius (1909); the same author has found that the specimens reported by Eppelsheim (1893) as 'S. kamtchaticus' belong in fact to *S. (s.str.) innuptus* Eppelsheim, 1893 and *S. (s.str.) secretus* Bernhauer, 1915 (Shavrin & Puthz 2007), as well as a female syntype of *S. (str.) mongolicus* Eppelsheim, 1889 actually belonging to 'S. kamtchaticus'. I find very doubtful also that study of isolated elytra from subfossil deposits can help to identify this species correctly (Wilson & Elias 1986, Short et al. 1992, Elias et al. 2000); so all the known palaeontological records must be considered questionable at least. I have seen no specimens of *S. aquilonius* from North America, however Dr. Puthz has kindly sent me a list of Nearctic localities, including Alaska and the Yukon Territory, from which the males of this species are known to him. Finally, the record from the Altai (Kastcheev & Puthz 2011) seems to be a result of misidentification by the first coauthor: Dr. Puthz has sent me the lists of the Kazakhstan material identified by him himself, and this specimen is absent there.

As *S. kamtschaticus*, the species has been reliably reported for the northern reaches of the Yenisey (J.Sahlberg 1880) and Lena River (Poppius 1909, Puthz 1967b), Tuva, Buryatia (Shavrin & Puthz 2007), Irkutsk Area (Anishchenko & Shavrin 1998, Shavrin, 2007, Shavrin & Puthz 2007), Chita Area (L.Benick 1924; Shavrin & Puthz 2007), Magadan Area (Ryabukhin 1999, on my identifications), Kamchatka (L.Benick 1921; Puthz 1965, 1967b; Ryabukhin 1999, on my identifications; Lobkova

& Semenov 2012, on my identifications), Mongolia (Puthz 1967a, 1971), and China (Puthz 2008, 2013).

The new data provided above in the Material section (more than 150 specimens deposited mainly in my collection) makes it possible to fill evident gaps in the pattern of distribution of *S. aquilonius* and to define more exactly the westernmost limit of the species range. This limit in its main part corresponds well to the Yenisey valley; and only in its Subarctic segment stretches westwards to the Polar Ural. According to my observation, in the middle part of the Yenisey valley, the species is rather occasional even on the right (eastern) river bank and vanishes completely on the left (western) side, whereas in 30–60 km eastwards the finds are quite common. I believe it to replace partially *S. clavicornis* there in habitats with somewhat higher soil moisture (hygro-mesic). The southernmost segment of the limit seems to be more intricate; in the West Sayan Mts and Tuva, *S. aquilonius* inhabits anyway both sides of the Yenisei.

## ACKNOWLEDGEMENTS

I am indebted to all the colleagues who had collected the material listed above and put it at my disposal. I express my profound gratitude to Mr. Alexey Gusakov (ZMMU) for invaluable assistance to my work with the Museum collections. I am also grateful to Dr. Volker Puthz (Schlitz, Germany) for the exhaustive information concerning the material studied by him.
