

Checklist of Mesozoic Curculionoidea (Coleoptera) with description of new taxa

Andrei A. Legalov

Legalov A.A. 2010. Checklist of Mesozoic Curculionoidea (Coleoptera) with description of new taxa. *Baltic J. Coleopterol.* 10(1): 71 - 101.

129 species of the Curculionid-beetles are known from the Mesozoic (Obrieniidae – 7, Nemonychidae – 74, Ithyceridae – 29, Belidae – 4, Anthribidae – 2, Rhynchitidae – 3, Brentidae – 2, Curculionidae – 7, Scolytidae – 1). New genera *Cretoxenoides* Legalov, gen.n. (type species: *Cretoxenoides erdeniensis* Legalov, sp.n.), *Buryatnemonyx* Legalov, gen.n. (type species: *Buryatnemonyx gratshevi* Legalov, sp.n.), *Selengarhynchoides* Legalov, gen.n. (type species: *Selengarhynchoides sharyngolensis* Legalov, sp.n.), *Creterhirhinus* Legalov, gen.n. (type species: *Creterhirhinus kzyldzharensis* Legalov, sp.n.), *Archaralites* Legalov, gen.n. (type species: *Archaralites zherichini* Legalov, sp.n.), and new species *Oxycorynoides gurbanensis* Legalov, sp.n. (Mongolia, Lower Cretaceous), *Cretoxenoides erdeniensis* Legalov, sp.n. (Mongolia, Lower Cretaceous), *Buryatnemonyx gratshevi* Legalov, sp.n. (Buryatiya, Lower Cretaceous), *Selengarhynchoides sharyngolensis* Legalov, sp.n. (Mongolia, Lower Cretaceous), *Gobicar ulugeiensis* Legalov, sp.n. (Mongolia, Upper Jurassic - Lower Cretaceous), *Creterhirhinus kzyldzharensis* Legalov, sp.n. (Kazakhstan, Upper Cretaceous), *Archaralites zherichini* Legalov, sp.n. (Arhara, Upper Cretaceous - Palaeocene).

Key words: Coleoptera, Curculionoidea, Jurassic, Cretaceous, checklist, new taxa.

Andrei A. Legalov. Zoological Museum, Institute of Animal Systematics and Ecology, SB RAS, Frunze street-11, Novosibirsk 630091 Russia; e-mail: legalov@ngs.ru

INTRODUCTION

The Curculionid-beetles have great importance in ecosystems. Transition of these beetles from development of generative organs to vegetative parts was a basis for differentiation of this group in the Mesozoic era. The basic groups of Curculionoidea were formed in Mesozoic era at first on proangiosperms and then on angiosperms. A study of Mesozoic Curculionid-

beetles is necessary for the decision of problems of evolution and a phylogeny of recent groups.

129 Curculionid-species (Obrieniidae – 7, Nemonychidae – 74, Ithyceridae – 29, Belidae – 4, Anthribidae – 2, Rhynchitidae – 3, Brentidae – 2, Curculionidae – 7, Scolytidae – 1) are known from the Mesozoic (6 species from the Triassic, 52 species from the Jurassic (51 from the Middle - Upper and 1 from Upper), 11 species from Upper Jurassic or Lower Cretaceous and 60 species from the Cretaceous (54 from Lower and 6 from

Upper)) (Arnoldi, 1977; Gratshev, 1998; Gratshev, Zherichin, 1995, 1996, 1997, 1999, 2000a, 2000b, 2003; Gratshev, Legalov, 2009, 2010; Kirejtshuk, Azar, Beaver, Mandelshtam, Nel, 2009; Kuschel, 1959, 1983; Kuschel, Poinar, 1993; Kuschel, Oberprieler, Rayner, 1994; Legalov, 2003, 2007, 2009a, 2009b, 2009c, 2009d; Liu, Ren, 2006, 2007; Liu, Ren, Shih, 2006; Liu, Ren, Tan, 2006; Martynov, 1926; Poinar, 2006, 2008, 2009; Poinar, Brown, 2009; Ponomarenko, Zherikhin, Kirejtshuk, 2004; Ren, 1995; Rheinheimer, 2004; Soriano, Gratshev, Delclòs, 2006; Soriano, 2009; Whalley, Jarzembowski, 1985; Zherichin, 1977, 1986, 1993; Zherichin, Gratshev, 1993, 1997, 2003, 2004).

MATERIAL AND METHODS

The list of locations: Russia: Arhara - Amur Prov., Arharinsk District, bottom of an open-cast mine of the Arhara hill, Arhara station, Upper Cretaceous - Palaeocene, Maastrichtian - Danian; Baissa - Buryatiya (Buryat Republic), Bauntovo District (in papers, appears as Eravnoe District or Sosnovoozersk District), left bank of the Vitim River downstream of the Baissa River, Lower Cretaceous, Neocomian, Zaza Formation; Khasurtyi - Buryatiya (Buryat Republic), Zakamensk District, 10 km SSE Tsakir, Khasurtyi River, Lower Cretaceous, Neocomian; Khetana - Khabarovskii krai, Okhotsk District, upstream of mouth of Snezhny Creek, left bank of Khetana River (tributary of Ul'ya River), Lower Cretaceous, Middle Albian, Uchulikanskaya and Emanrinskaya Formations; Mongolia: Bontsagaan - Bayan-Khongor aymag, 8 km S Bontsagan-Nur Lake, foothill of Dund-Ula Range, Lower Cretaceous, ?Lower Aptian, Bontsagan series, Ulan-Argalant and Khurilt beds; Gurban-Ereny-Nuruu - Western Mongolia, Gobi-Altay aymag, SW of Ikhes-Nuur Lake and Darbi-Somon settlement, Lower Cretaceous, Lower Neocomian, Gurban-Eren Formation, Zereg Formation; Hutel-Hara - South-eastern Mongolia, Dorno-Gobi aymag, 70 km SE of Sain-Shand town, Khutel-Khara Mountain, Lower Cretaceous, Neocomian, Tsagaan-Tsav Formation; Khutuliyin-Khira - Umnu-Gobi aymag, 25 km S Mandal-Obo-Somon

settlement, Mushugay, Upper Jurassic - Lower Cretaceous, Ulugei Formation; Shar-Tolgoy - South Mongolia, Dorno-Gobi aymag, SE Ikh-Bogdo-Mount, 33 km N Bajan-Leg-Somon, Bayan-Khongor aymag, Mongolia, Lower Cretaceous, ?Lower Aptian, Bontsagan series, Shar-Tologoy Beds; Shar-Teg - South-western Mongolia, Gobi-Altay aymag, southeast of Adgh-Bogdo, southern Shar-Teg-Mountains, Upper Jurassic, Tithonian, Shar-Teg Sequence; Sharyn-Gol - North Mongolia, Selenga aymag, 45 km SE Darkhan town, Sharyn-Gol coal quarry, Lower Cretaceous, Middle Neocomian, Sharyn-Gol Formation; Erdeni-Uul - Ubur-Khangay aymag, 80 km E Hovd-Somon settlement, S slopes Erdeni-Ula mount, Lower Cretaceous, Middle Neocomian, Huhtyk Formation; Kazakhstan: Kenderlyk - East Kazakhstan Region, Zaysan District, left bank of Akkolka Creek in Kenderlyk River Basin, Upper Triassic, Norian - Rhaetian, Tologoy Formation; Karatau - South Kazakhstan, Chimkent Oblast, Algabass District, Kara-Tau Range, outcrops near villages of Kitaevka and Uspenovka, right bank of Kashkar-Ata River valley, Kara-Bas-Tau, Tchokhay, Mikhailovka, Galkino; Middle - Upper Jurassic, ?Oxfordian, Karabastau Formation; Kzyl-Dzhar - South Kazakhstan, Kzyl-Ordinskaya Region, Chiili District, NE spurs of Kara-Tau mountain range, Upper Cretaceous, Turonian; Kyrgyzstan: Madygen - Ost Region, Lyaylyak District, southwestern area of Madygen Triassic field; Middle - Upper Triassic, Ladian - Carnian, Madygen Formation; UK: Purbeck - South UK, Dorset, Isle of Portland, Suckthumb Quarry; Lower Cretaceous, Lower Berriasian, Purbeck Limestone Group, Lower Purbeck beds; Spain: Montsec - Lleida Province, Quarry near Rubies, Sta. Maria de Meia, Sierra del Montsec; Lower Cretaceous, Berriasian - Barremian, Calcaires lithographiques a Plantes et Vertebres de la Pedrera de Rubies Formation; Las Hoyas - Cuenca Province, 30 km E of Cuenca city; Lower Cretaceous, Hauterivian - Barremian; La Huerguina Formation; France: French amber - SW France Archingeay-Les Nouillers, Charente-Maritime, Lower Cretaceous, Albian; Lebanon: Lebanon amber - North Lebanon, South of Jezzín village, 30 km East of Sàida Mt.; Lower Cretaceous, Middle Neocomian

-Lower Aptian, Chouf Sandstone Formation; Brazil: Santana - Northeast Brazil, southern margin of Chapada do Araripe; Lower Cretaceous, Aptian-Albian; Crato Formation; Chile: Magallanes - Gerro Guido, Magallanes, Upper Cretaceous, Maastrichtian; USA: New Jersey amber - Central New Jersey; Upper Cretaceous, Turonian, South Amboy Fire Clay, Raritan Formation; Botswana: Orapa - Central Botswana, Orapa diamond mine, Orapa, Upper Cretaceous, Cenomanian; China: Xiazhuang - West Beijing, Jingxi Basin; Lower Cretaceous, Aptian-Albian, Xiazhuang Formation; Yixian - Western Liaoning province, Lingyuan Country, 25 km SE of Beipiao city, Chaoyang, Daxinfangzi and Chaomidian villages; Upper Jurassic - Lower Cretaceous, Yixian Formation; Myanmar: Myanmar amber - Northern Myanmar (Burma), amber from Irravadi river basin; Upper Cretaceous, Cenomanian or Lower Cretaceous, Albian.

Figs. 4-6 have been made by V.G. Gratshev.

RESULTS

Family Obrieniidae Zherikhin & Gratshev, 1993

Obrieniidae Zherikhin & Gratshev, 1993: 51
Type genus: *Obrienia* Zherikhin & Gratshev, 1993

Subfamily Obrieniinae Zherikhin & Gratshev, 1993

Obrieniinae Zherikhin & Gratshev, 1993: 51
Type genus: *Obrienia* Zherikhin & Gratshev, 1993

Genus *Oxycorynoides* L. Arnoldi, 1977

Oxycorynoides L. Arnoldi, 1977: 159

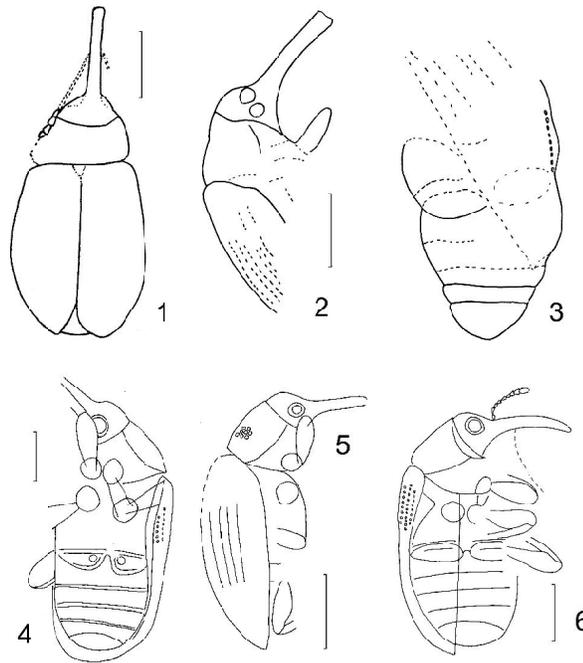

Type species: *Oxycorynoides similis* L.
Arnoldi, 1977

Subgenus *Oxycorynoides* s. str.

***Oxycorynoides (Oxycorynoides) gurbanensis*
Legalov, sp.n. (Fig. 2)**

Material. Holotype – ex. (PIN¹ 3149/980),
Western Mongolia, Gobi-Altay aimag, SW of
Ikhes-Nuur Lake and Darbi-Somon settlement,
Lower Cretaceous, Lower Neocomian, Gurvan-
Eren Formation, Zereg Formation.

Description. Body light brown. Rostrum long,
5.48 times longer than the width, 1.47 times longer
than pronotum, equal width on profemora. Frons
convex, narrow. Eyes not large, almost round.
Temples shorter than eye. Pronotum weakly
elongated, with lateral carina. Disk, probably,
largely punctate. Elytra weakly convex, with
distinct striae. Intervals wide, possibly, weakly
convex. Procoxa located near the prothorax basis.
Precoxal part of the prothorax elongated.
Metathorax wide. Femora weakly widened.
Length of the extant part of body: 2.5 mm.

Figs. 1-6. Curculionoidea gen. spp.: 1 – *Buryatnemonyx gratshevi* (PIN¹ 5026/41), 2 – *Oxycorynoides gurbanensis* (PIN¹ 3149/980), 3 – *Archaralites zherichini* (PIN¹ 2055/34), 4 – *Selengarhynchoides sharyngolensis* (PIN¹ 4306/2), 5 – *Cretoxenoides erdenienseis* (PIN¹ 4300/1), 6 – *Gobicar ulugeienseis* (PIN¹ 4288/362). Scale 1.0 mm.

Diagnosis. This new species differs from *Oxycorynoides mongolicus* Zherikhin, 1986 by the stronger widened basis of the rostrum, smaller eyes and larger punctate pronotum.

Etymology. The name is derived from the location “Gurvan” – “gurvanensis”.

Distribution. Gurvan-Ereny-Nuruu.

***Oxycorynoides (Oxycorynoides) mongolicus* Zherikhin, 1986**

? *Oxycorynoides mongolicus* Zherikhin, 1986: 107

Oxycorynoides mongolicus: Soriano, Gratshev, Delclòs, 2006: 564

Distribution. Karatau.

Genus *Cretoxenoides* Legalov, gen.n. (Fig. 5)

Type species: *Cretoxenoides erdeniensis* Legalov, sp.n.

Description. Body brown. Rostrum long, longer than pronotum, narrower than profemora. Eyes round. Temples short. Pronotum with lateral carina. Disk largely punctate. Elytra weakly convex, with distinct striae. Intervals wide, flat.

Exterior margin of elytra straight line. Procoxa located near the prothorax basis. Abdomen convex. 1st and 2nd ventrites of almost equal length, narrow. Femora weakly widened. Length of body: 3.4 mm.

Diagnosis. This new genus differs from *Medmetrioxenoides* Gratshev and Legalov, 2009 by the rostrum thinner than tibiae, stronger convex body and largely punctate pronotum.

Etymology. The name is formed from the words “Cretaceous” and “Metrioxenoides”.

***Cretoxenoides erdeniensis* Legalov, sp.n.** (Fig. 5)

Material. Holotype – ?female (PIN ¹ 4300/1), Mongolia, Ubur-Khangay aymag, 80 km E Hovd-Somon settlement, S slopes Erdeni-Ula mount; Lower Cretaceous, Middle Neocomian, Huhtyk Formation.

Description. Body, judging from the chitin remains, dark brown. Rostrum long, 5.75 times longer than the width, little longer than pronotum, narrower than profemora. Frons flattened. Eyes not large, round. Temples shorter than eye. Pronotum weakly elongated, with lateral margin. Disk largely punctate. Elytra weakly convex, 3.36 times longer than pronotum, with distinct striae. Intervals wide, flat. Exterior margin of elytra straight line. Procoxa spherical, located near the prothorax basis. Precoxal part of the prothorax elongated. Metathorax wide. Abdomen convex. 1st and 2nd ventrites of almost equal length, narrow. Femora weakly widened. Length of body: 3.4 mm.

Etymology. The name is derived from the location “Erdeni” – “erdenensis”.

Distribution. Erdeni-Uul.

***Selengarhynchus ovalis* Gratshev & Legalov, 2009**

Selengarhynchus ovalis Gratshev & Legalov, 2009: 415

Distribution. Sharyn-Gol.

Genus *Selengarhynchoides* Legalov, gen.n.

(Fig. 4)

Type species: *Selengarhynchoides sharyngolensis* Legalov, sp.n.

Description. Body light brown. Rostrum, probably, long, narrow. Frons convex. Eyes large. Temples short. Pronotum weakly elongated, with lateral carina. Disk largely and densely punctate. Elytra with distinct striae. Intervals wide. Points in striae large. Exterior margin of elytra curved. Procoxa near prothorax basis. Precoxal part of the prothorax elongated. Metathorax wide. Abdomen flattened. 1st and 2nd ventrites of almost equal length. 5th ventrite elongated. Femora weakly widened. Length of body: 5.5 mm.

Diagnosis. This new genus differs from *Selengarhynchus* Gratshev et Legalov, 2009 by the larger body (5.5 mm), thicker rostrum and larger points in elytral striae.

Etymology. The name is formed by addition of the ending “-ides” to “Selengarhynchus”.

***Selengarhynchoides sharyngolensis* Legalov, sp.n.** (Fig. 4)

Material. Holotype – ?male (PIN¹ 4306/2), North Mongolia, Selenga aymag, 45 km SE Darkhan town, Sharyn-Gol coal quarry, Lower Cretaceous, Middle Neocomian, Sharyn-Gol Formation. Paratype – ?female (PIN¹ 4306/3), idem.

Description. Body light brown. Rostrum, probably, long, narrower than profemora. Frons convex. Eyes large, round. Temples shorter than eye. Pronotum weakly elongated, 1.87 times longer than head, with lateral carina. Disk largely and densely punctate. Elytra 3.0 times longer than pronotum, with distinct striae. Intervals wide, flat. Points in striae large. Exterior margin of the elytra curved. Epipleura distinct. Procoxa spherical, located near prothorax basis. Precoxal part of the prothorax elongated. Metathorax wide. Abdomen flattened. 1st and 2nd ventrites of almost equal length, narrow. 3rd ventrite narrower than 2nd ventrite. 4th ventrite narrower than 3rd ventrite. 5th ventrite little wider than 1st ventrite. Femora weakly widened. Length of body: 5.5 mm.

Etymology. The name is derived from the location “Sharyn-Gol” – “sharyngolensis”.

Distribution. Sharyn-Gol.

Genus *Buryatnemonyx* Legalov, gen.n. (Fig. 1)
 Type species: *Buryatnemonyx gratshevi* Legalov, sp.n.

Description. Body flattened. Rostrum long. Antennae attached before the rostrum middle, reaching the pronotum middle. Eyes not convex. Temples shorter than eye. Clava not compact. Pronotum strongly transversal, with the greatest width on the middle. Elytra wide. Femora weakly widened. Length of body: 4.1 mm.

Diagnosis. This new genus differs from *Distenorrhinus* L. Arnoldi, 1977 by antennae located before rostrum middle and narrow clava not distinct separated from funicle.

Etymology. The name is formed from the words “Buryatiya” and “Nemonyx”.

***Buryatnemonyx gratshevi* Legalov, sp.n.** (Fig. 1)
Material. Holotype – ex. (PIN ¹ 5026/41), Buryatiya (Buryat Republic), Zakamensk District, 10 km SSE Tsakir, Khasurtyi River.

Description. Body flattened dorsoventrally, black. Rostrum long, hardly narrowed to place of antennal attachment, further weakly widened to apex, 12.1 times longer than width, 2.43 times longer than pronotum. Antennae located before the rostrum middle. Head large, wider than length. Eyes large, not convex. Temples shorter than eye. Antennae long, reaching the pronotum middle. Funicle segments elongated. 7th segment of funicle similar to claval segments. Clava not compact, 1.75 times wider than funicle. 1st segment trapezoid. 2nd segment trapezoid, longer than 1st segment. 3rd segment tear-shaped. Pronotum transversal, 2.37 times wider than long. The greatest width on the middle. Elytra wide, 1.36 times longer than width, 4.86 times longer than pronotum. Elytra in humeri wider than

pronotum. Femora weakly widened. Length of body: 4.1 mm.

Etymology. This new species is named in honour of V.G. Gratshev.

Distribution. Khasurtyi.

***Gobicar ulugeiensis* Legalov, sp.n. (Fig. 6)**

Material. Holotype – ?female (PIN¹ 4288/362),
 Mongolia, Umnu-Gobi ajmag, 25 km S Mandal-
 Obo-Somon settlement, Mushugay, Upper
 Jurassic - Lower Cretaceous, Ulugei Formation.
Description. Body dark brown. Rostrum long,
 7.67 times longer than the width, 1.44 times longer
 than pronotum, narrower than femora, weakly
 curved. Antennae attached in first third of
 rostrum. Frons weakly convex. Eyes large, round.
 Temples shorter than eye. Antennae short.
 Segments trapezoid. Clava not compact, shorter
 and wider than funicle. 1st segment trapezoid.
 2nd segment little longer than 1st segment. 3rd
 segment elongated, equal on length to the

previous segments together taken. Pronotum
 weakly elongated, with lateral carina. Disk
 flattened, probably, small punctate. Elytra 3.2
 times longer than pronotum, with distinct striae.
 Intervals narrow, flat. Exterior margin of elytra
 straight line. Procoxa spherical, located near the
 prothorax basis. Precoxal part of prothorax weakly
 elongated. Metepisternum narrow. Metathorax
 wide. Abdomen flattened. 1st-4th ventrites of
 almost equal length. 5th ventrite elongated.
 Femora weakly widened. Length of body: 4.4 mm.
Diagnosis. This new species is like to *Gobicar*
ponomarenkoi Gratshev & Zherikhin, 1999 but
 differs by larger sizes of body, more strongly
 curved rostrum and longer 5th ventrite.
 Etymology. The name is derived from the location
 “Ulugei” – “ulugeiensis”.

Distribution. Khutuliy-Khira.

Erirhininae tribe incertae sedis
Genus *Creterhirhinus* Legalov, gen.n. (Figs. 7-
10)

Type species: *Creterhirhinus kzyldzharensis* Legalov, sp.n.

Description. Body light brown. Head roundish. Rostrum long, widened to apex. Eyes no protruding from contour of the head. Pronotum weakly transversal, with punctate disk. Elytra convex, with distinct striae and narrow intervals. Abdomen convex. 1st and 2nd ventrites elongated. 3rd - 5th ventrites narrow. Length of body: 1.9 mm.

Diagnosis. This new genus differs from unique described cretaceous genus *Cretulio* Zherikhin, 1993 of subfamily Erihinae by the form of body, shorter rostrum and small sizes of body.

Etymology. The name is formed from the words "Cretaceous" and "Erihinae".

***Creterhirhinus kzyldzharensis* Legalov, sp.n.** (Figs. 7-10)

Material. Holotype – male (PIN¹ 2383/266), South Kazakhstan, Kzyl-Ordinskaya Region, Chiili District, NE spurs of Kara-Tau mountain range.

Description. Body light brown. Head roundish. Rostrum long, 5.33 times longer than width and equal on length to pronotum, widened to apex. Eyes no protruding from contour of the head. Pronotum weakly transversal, 1.09 times wider than length. Disk convex, punctate. Elytra convex, 2.11 times longer than width on the middle, 2.81 times longer than pronotum, with distinct striae. Points in striae large. Intervals narrow, convex. Abdomen convex, small punctate. 1st and 2nd ventrites elongated, approximately equal length. 3rd - 5th ventrites narrow. 2nd ventrite 1.55 times longer than 3rd ventrite. 4th ventrite little narrower than 3rd ventrite. 5th ventrite equal on width to 4th ventrite. Length of body: 1.9 mm.

Etymology. The name is derived from the location "Kzyl-Dzhar" – "kzyldzharensis".

Distribution. Kzyl-Dzhar.

Subfamily Molytinae Schoenherr, 1823

Gyrbykana curvipes Zherikhin, 1993: 36

Gyrbykana curvipes: Legalov, 2009c: 293

Distribution. Khetana.

Genus *Archaralites* Legalov, gen.n. (Fig. 3)

Type species: *Archaralites zherichini* Legalov, sp.n.

Description. Body light. Elytra convex, with deep striae and wide intervals. Metathorax convex, punctate. Abdomen small and densely punctate. 1st and 2nd ventrites elongated. 3rd and 4th ventrites narrow. 5th ventrite elongated. Length of metathorax and abdomen: 3.6 mm.

Diagnosis. This new genus differs from *Gyrbykana* Zherikhin, 1993 by the dense punctate bottom, elongated 5th ventrite, convex metathorax and larger sizes of the body.

Etymology. The name is formed from the word "Archara".

***Archaralites zherichini* Legalov, sp.n. (Fig. 3)**

Material. Holotype – male (PIN¹ 2055/34), Amur Prov., Arharinsk District, bottom of an open-cast mine of the Arhara hill, Arhara station.

Description. Body light. Elytra of bad safety. Striae deep, with small points. Intervals wide, convex, smooth. Metathorax convex, dense and largely punctate. Metacoxal cavities large oval. Abdomen small and densely punctate. Intervals convex. 1st and 2nd ventrites elongated, approximately equal length. 2nd and 4th ventrites narrow, approximately equal length, little wider than 3rd ventrite. 5th ventrite elongated, convex, longer than 3rd and 4th ventrites together taken. Length of metathorax and abdomen: 3.6 mm.

Remarks. The beetle is presented only by metathorax, abdomen and part of left elytra. The abdomen is weakly pressed shows on the male.

Etymology. This new species is named in honour of V.V. Zherichin.

Distribution. Arkhara.

DAUGAVPILS UNIVERSITY

Institute of Systematic Biology

The Laboratory of Systematic Coleopterology conducts research in systematic, taxonomy, morphology, fauna and biogeography of beetles (*Coleoptera*).

Main research topics of The Laboratory of Systematic Coleopterology:

- Beetles (Coleoptera) of Baltic region - fauna, distribution, taxonomy and conservation;
- World fauna, biogeography, taxonomy and sistematics of Carabid beetle (Carabidae), Carrion beetle (Silphidae), Rove beetle (Staphylinidae), leaf beetle (Chrysomelidae), Curculionid beetle (Curculionidae) families etc.;
- Research of beetle (Coleoptera) morphology, using confocal Laser Scanning Microscopy and Elektronmicroscopy methods;
- Bio-irisation research in beetles(Coleoptera).

a Sofia & Moscow based Scientific Publishers and Booksellers
are pleased to offer more than 10 000 titles in natural history and other
branches of science browseable and searchable at Pensoft Online
Bookshop's address:

www.pensoft.net

We are always keen to discuss possibilities for publishing your manu-
scripts in taxonomy and faunistics of insects.

PENSOFT have been launched by scientists for the scientists!
